

## **SQL MINI PROJECT**

MySQL project which is a cloned mimic version of Instagram database. It is used to perform data analysis for real world business related questions and scenarios such as

1. Find 5 new users
2. Find 5 oldest users.
3. Find the date when most of the users registered
4. Identify Inactive Users (users with no photos)
5. How many times does the average user post?
6. Find the five most popular hashtags
7. Find the bots (the users who have liked every single photo)
8. Total numbers of users who have posted at least one time
